

Javier Ramos Humeres

Software Engineer | Full-Stack & AI-Augmented Development

jiramos87@gmail.com • Santiago, Chile • javier-ramos-humeres • github.com/jiramos87

Full-stack software engineer with 4+ years building production systems end-to-end, from requirements and architecture to backend services, frontend and cloud. Physics graduate combining strong fundamentals with an AI-augmented workflow: ships production code daily with AI agents and builds custom agent tooling (Claude Code skills, MCP servers, automated issue-to-PR pipelines). Core stack: Node.js / NestJS, TypeScript, React / Next.js, Python, SQL, GraphQL, MongoDB, AWS and GCP.

PROFESSIONAL EXPERIENCE

Software Engineer - TeselaGen 08/2025 – Present | Santiago, Chile (Hybrid)

- Led a full migration of the legacy API to a modern TypeScript backend with NestJS and clean architecture (v2), modernizing the services that power TeselaGen's user-facing biotech tools..
- Built backend services and frontend features in React / Next.js across multiple user-facing tools, building REST and GraphQL APIs and the data and integration layers that feed the AI copilot..
- Built a Python client SDK that, from the auto-generated OpenAPI/Swagger docs of the NestJS backend, produces a complete programmatic API client for consuming the platform's Custom Tools.
- Built an agentic development toolchain in Claude Code: custom skills and MCP server/tools.

Backend Developer - Pinflag 05/2022 – 08/2025 | Santiago, Chile

- Built end-to-end payment integrations (Klap, Transbank, Getnet): checkout flows, confirmation webhooks, reconciliation, refunds and failure recovery.
- Automated order management and fulfillment for e-commerce clients.
- Built an analytics backend for large data volumes and its Chart.js frontend dashboard, with data export to Excel / CSV.
- Built event-driven microservices on AWS Lambda and the Serverless Framework (webhooks, SNS/SQS queues) for customer notifications (WhatsApp API) and payment integrations.

PROJECTS

Isometric City-BUILDER (Unity, C#) - Personal Project

End-to-end testbed for agentic development. Built a project-level MCP server, multi-agent and PRD-driven workflows, and a custom library of Claude Code skills and subagents that run automated implement-and-verify cycles.

EDUCATION

Diploma in Software Engineering, Universidad de Chile  04/2025 – 08/2025 | Santiago, Chile

B.Sc Physics, Pontificia Universidad Católica de Chile  2005 – 2010 | Santiago, Chile

Full Stack Web Development, 4Geeks Academy  2021 – 2022 | Santiago, Chile

PUBLICATIONS

Sound Synthesis of a Gaussian Quantum Particle in an Infinite Square Well. 2014

Computer Music Journal (MIT Press)

Peer-reviewed; physics-based sound synthesis.

SKILLS

Languages: JavaScript, TypeScript, Python, C#, SQL, **Backend:** Node.js, NestJS, Express, REST APIs, GraphQL, event-driven microservices, clean architecture and SOLID, authentication & encryption, serverless (AWS Lambda + Serverless Framework), Sequelize, TypeORM, **Databases:** PostgreSQL, MongoDB, **Frontend:** React (Hooks), Next.js, Tailwind CSS, Chart.js, **Testing:** Jest, bun test, Cypress, Playwright (unit, integration and e2e), **Cloud & DevOps:** AWS (S3, SES, SNS, SQS, Lambda), GCP, Docker, CI/CD, GitHub Actions, Heroku, Serverless Framework, **CI/CD:** Github/Heroku/AWS, **AI & Agentic Dev:** Claude Code (desktop and CLI), MCP servers and tooling, agent skills and workflow design, Cursor, GitHub Copilot, **Specialized:** payment gateways (Klap, Transbank, Getnet), e-commerce (Shopify, WooCommerce), order management, WhatsApp API

LANGUAGES

Spanish: Native • **English:** Fluent • **Portuguese:** Conversational
