

Javier Ramos Humeres

Software Engineer | Full-Stack, AI Agents & MCP (TypeScript/Node)

jiramos87@gmail.com • Santiago, Chile • javier-ramos-humeres • github.com/jiramos87 • javierramos.dev

Full-stack software engineer with 4+ years building production systems end-to-end, from requirements and architecture to backend services, frontend and cloud. Physics graduate with an AI-native workflow: ships production code daily with AI agents and builds custom agent tooling (Claude Code skills, MCP servers, automated issue-to-PR pipelines). Core stack: Node.js / NestJS, TypeScript, React / Next.js, Python, SQL, GraphQL, MongoDB, AWS and GCP.

PROFESSIONAL EXPERIENCE

Software Engineer - TeselaGen

08/2025 – Present | Santiago, Chile (Hybrid)

- Led the v1-to-v2 migration of a legacy biotech API to a modern NestJS / TypeScript clean-architecture backend: 58 controllers and 182 REST endpoints shipped to master across 40+ PRs, powering the platform's AI copilot and user-facing biotech tools.
- Built the agentic delivery pipeline behind that migration (custom Claude Code skills, a project MCP server, and automated issue-to-PR workflow with verification), cutting per-controller migration time from one week to a day.
- Built a Python client SDK auto-generated from the backend's OpenAPI/Swagger docs, covering 100% of the v2 API surface by design, so scientists and engineers consume the platform's Custom Tools programmatically.
- Built backend services and frontend features in React / Next.js across multiple user-facing tools, including the REST and GraphQL APIs and the data and integration layers that feed AI features.

Backend Developer - Pinflag

05/2022 – 08/2025 | Santiago, Chile

- Built end-to-end payment integrations (Klap, Transbank, Getnet) serving custom Shopify checkouts, confirmation webhooks, reconciliation, refunds and failure recovery for ~10,000 orders/month.
- Built an analytics backend that auto-gathers and pre-aggregates ~10,000 orders/month through hourly and daily cron jobs, with a Chart.js dashboard and Excel / CSV export.
- Built event-driven microservices on AWS Lambda and the Serverless Framework (webhooks, SNS/SQS queues) powering payment integrations and customer notifications (~1,000 WhatsApp API messages/month).

PROJECTS

Agentic Dev Kit (open source)

2026 – Present

Claude Code skills, MCP server and PRD templates for spec-driven agentic delivery.

World Music Map (live)

2026 – Present

interactive music discovery map. Next.js App Router (RSC), TypeScript, Prisma, PostgreSQL, MapLibre.

EDUCATION

Diploma in Software Engineering, Universidad de Chile

04/2025 – 08/2025 | Santiago, Chile

B.Sc Physics, Pontificia Universidad Católica de Chile

2005 – 2010 | Santiago, Chile

Full Stack Web Development, 4Geeks Academy

2021 – 2022 | Santiago, Chile

PUBLICATIONS

Sound Synthesis of a Gaussian Quantum Particle in an Infinite Square Well.

2014

Computer Music Journal (MIT Press) - Peer-reviewed; physics-based sound synthesis.

SKILLS

Languages: JavaScript, TypeScript, Python, C#, SQL, **AI & Agentic Dev:** Claude Code (desktop and CLI), MCP servers and tooling, LLM integration (Anthropic API, OpenAI API), agent skills and workflow design, Cursor, GitHub Copilot, **Backend:** Node.js, NestJS, Express, REST APIs, GraphQL, microservices, CLEAN architecture, auth & encryption, serverless (AWS Lambda), **Databases:** PostgreSQL, MongoDB, **Frontend:** React (Hooks), Next.js, Tailwind CSS, Chart.js, **Testing:** Jest, bun test, Cypress, Playwright (unit, integration and e2e), **Cloud & DevOps:** AWS (S3, SES, SNS, SQS, Lambda), GCP, Docker, CI/CD, GitHub Actions, Heroku, Serverless Framework, **CI/CD:** Github/Heroku/AWS, **Specialized:** payment gateways (Klap, Transbank, Getnet), e-commerce (Shopify), order management, WhatsApp API

LANGUAGES

Spanish: Native • **English:** Fluent • **Portuguese:** Conversational
